CLICK IT, DO NOT IMAGINE IT

PREPARED BY COURTRIGHT COLLECTIVE

Your Client *Portal*

A working demo, built with your name on it, so you can click through the thing instead of imagining it.

LIVE DEMO

YOUR BRANDING

7 DAYS

COURTRIGHTCO.COM

BUILT IN NASHVILLE

Your Client Portal

Prepared for: [CLIENT NAME] **Business:** [BUSINESS NAME] **Demo link:** [URL] **Demo login:** [username / password] **Live until:** [DATE, 30 days out] **Prepared by:** Dillon Courtright, Courtright Collective

What you are looking at

[Two or three sentences. What the demo shows, what is real, and what is faked. Be completely clear about the line between the two, because the whole relationship depends on it.]

This is a demo, not a product. The screens are real and clickable. The data is made up. Nothing you click sends an email, charges a card, or stores anything permanently.

The problem we are solving

[Restate what they told you, in their words. The specific version, not the general one. "Clients email you documents and you lose them in a thread" beats "improving client communication."]

What it costs you today: [time per week, or the specific failure that keeps happening]

What is in the demo

SCREEN	WHAT IT DOES	REAL OR FAKED IN THIS DEMO
Login	[note]	[note]
Dashboard	[note]	[note]
[Documents / files]	[note]	[note]
[Status or progress]	[note]	[note]
[Messages]	[note]	[note]
[Invoices or payments]	[note]	[note]
[Forms or intake]	[note]	[note]
Admin view	[note]	[note]

Try these three things first:

- 1. [Specific click path that shows the main value]
- 2. [Second one]
- 3. [Third one]

What your client would experience

[Walk through it from the customer's side, step by step, in plain language. This is the section that sells it, because it is the part they have never been able to picture.]

- 1. [They receive...]
- 2. [They click...]
- 3. [They see...]
- 4. [They do...]
- 5. [You get notified...]

What you would experience

[Same walkthrough from their side. Emphasize what stops happening: the emails they no longer send, the documents they no longer chase, the status calls they no longer take.]

What stops happening:

- [thing]
- [thing]
- [thing]

What would change for the real build

Everything the demo fakes, and what it takes to make it real.

FAKED IN THE DEMO	WHAT THE REAL VERSION NEEDS	EFFECT ON COST AND TIME
[thing]	[what is required]	[note]
[thing]	[what is required]	[note]
[thing]	[what is required]	[note]

What I would need from you

- [Decision or asset needed]
- [Decision or asset needed]

- [Decision or asset needed]
- [Roughly how many hours of your time, honestly]

What it would cost to build for real

VERSION	WHAT YOU GET	PRICE	TIMELINE
Starter	[the smallest genuinely useful version]	[price]	[weeks]
Full	[everything in the demo, working]	[price]	[weeks]
Full + integrations	[plus the connections to their existing tools]	[price]	[weeks]

Ongoing: [hosting, maintenance, support, monthly cost]

What you own: all of it. Code, accounts, domain, data. In your name, handed over at the end. If you ever want to take it somewhere else, you can, and I will help you do it.

The honest assessment

[Whether they should actually build this, in plain terms. Sometimes the answer is a shared folder and a better email template, and if that is the answer, say it. The demo already got paid for.]

My read: [recommendation]

The cheapest thing that would help right now: [often not the portal]

Next steps

The demo stays live for 30 days at the link above. Share it with anybody who needs to see it, including the people who will have to approve the spend.

If you want to move forward, reply to this email and we will pick a start date. If not, no follow-ups from me, and the demo is yours to keep as a reference.

Internal notes, delete before sending

Time budget: 5 to 7 hours across 7 days. This is the most expensive service in the library to deliver, so protect the scope.

- **Intake, before you build anything, 30 min**
 - [] What do clients email you about most?

- [] What documents move back and forth?
- [] What do clients ask for status on?
- [] What do you currently do by hand every single time?
- [] What tools are already in play? (QuickBooks, Calendly, Dropbox, their CRM)
- [] Who else has to approve a purchase like this?
- [] Brand assets: logo, colors, fonts

▪ **Build, 4 to 5 hours**

- [] Start from the Indie App Starter Kit scaffold. Do not start from zero, ever
- [] Their colors and logo in, first. It is what makes the demo land
- [] Three to five screens maximum. **Resist building more**
- [] Realistic fake data using their actual client types and their actual vocabulary. Generic placeholder data kills the illusion instantly
- [] Works on a phone. They will open it on a phone first, guaranteed
- [] A demo login that cannot break, and cannot be broken by clicking around
- [] Deploy to a subdomain. Set a calendar reminder to take it down at 30 days

▪ **Write-up, 45 min**

- [] Fill in this template
- [] Three specific click paths, tested in order
- [] Prices for all three tiers, decided before you send, never "we can discuss"

▪ **Rules**

- **Be relentlessly clear about what is faked.** Overselling a demo is how you end up with a client expecting a product in two weeks
- Their words on every screen. Their client types, their job names, their vocabulary
- **Five hours is the cap.** At \$149 this is deliberately close to break-even. It is a sales tool, not a profit center, and it converts at a rate that makes that fine
- The honest assessment section is required. Sometimes the answer is a shared folder, and saying so is what makes the yes credible
- Reuse aggressively. After three of these you have a component library and the build drops to two hours
